# Government Spending Tracker

A comprehensive web application that simulates the government budget
proposal and approval process. Government ministries submit budget
requests, which are reviewed and approved by the Ministry of Finance. The
system maintains real-time budget tracking, provides detailed analytics,
and ensures transparency through comprehensive audit trails.

## What It Does
```

```
The Government Spending Tracker streamlines the government budget
management process by:

- **Digitizing Budget Proposals**: Ministries submit budget requests
through an intuitive web interface
- **Automating Ministry Management**: New ministries are automatically
created when needed
- **Real-time Budget Tracking**: Live monitoring of allocated vs remaining
budgets across categories
- **Streamlined Approval Process**: Finance department reviews and
approves/rejects proposals with custom amounts
- **Comprehensive Reporting**: Dashboards, analytics, and CSV exports for
transparency
- **File Processing**: Bulk proposal creation through CSV/JSON file
uploads

## Architecture & Technology Stack

### **Frontend (React)**
- **Framework**: React with Create React App
- **Styling**: Custom CSS with responsive design
- **State Management**: React Context API for user authentication
- **HTTP Client**: Axios for API communication
- **Charts**: Chart.js for data visualization
- **Authentication**: JWT token management

### **Backend (FastAPI)**
- **Framework**: FastAPI with automatic API documentation
- **Database**: PostgreSQL (Azure App Service) via SQLAlchemy + Alembic
(SQLite fallback for local development)
- **Authentication**: JWT tokens with bcrypt password hashing (secure,
production-ready)
- **Architecture**: Service layer + Repository pattern (SOLID principles)
- **Configuration**: Environment-based settings (no hardcoded values)
- **Validation**: Pydantic models for data validation
- **File Processing**: CSV/JSON upload and parsing with smart field
mapping
- **Error Handling**: Domain exceptions with proper HTTP status codes

### **Database Design**
- **PostgreSQL** schema in production (SQLite-compatible for local dev)
- **4 Core Tables**: ministries, categories, users, proposals
- **Referential Integrity**: All relationships properly maintained
- **Auto-creation**: Ministries created automatically during proposal
submission

## Project Structure
```

```
## Getting Started

### Backend

1) Install dependencies

```bash
cd backend
pip3 install -r requirements.txt
```
```

2. Configure environment (optional)

Create a `.env` file in the `backend/` directory (optional, defaults provided). Postgres is recommended for Azure deployments, SQLite works for local dev:

```
# backend/.env
SECRET_KEY=your-secret-key-change-in-production
# Example Azure PostgreSQL connection string (psycopg 3 driver)
DATABASE_URL=postgresql+psycopg://db_user:strongpassword@your-pg-host.postgres.database.azure.com:5432/gov_spending?sslmode=require

# Local fallback (optional)
# DATABASE_URL=sqlite:///./government_spending.db
```

```
CORS_ORIGINS=http://localhost:3000
ACCESS_TOKEN_EXPIRE_MINUTES=30
```

3. Run database migrations (creates tables automatically)

```
cd backend
alembic upgrade head
```

Or the API will run migrations automatically on startup.

4. Run the API

```
cd backend
uvicorn main:app --reload
```

Or:

```
cd backend
python3 -m uvicorn main:app --reload
```

The API runs at http://localhost:8000

- API Documentation: http://localhost:8000/docs
- Alternative Docs: http://localhost:8000/redoc
- Health Check: http://localhost:8000/health
- Metrics: http://localhost:8000/metrics

Or use Docker Compose (recommended for Phase 3):

```
docker-compose up -d
```

Frontend

1. Install dependencies (created with Create React App)

```
cd frontend
npm install
```

2. Configure environment (optional)

Create a `.env` file in the `frontend/` directory (optional, defaults to localhost:8000):

```
# frontend/.env
REACT_APP_API_BASE_URL=http://localhost:8000
```

3. Start the dev server

```
npm start
```

The app runs at http://localhost:3000

Authentication & User Roles

The system supports two user roles with comprehensive access control:

Default Users

- **Finance User**: `finance` / `fin` - Can approve/reject proposals and manage categories
- **Ministry User**: `ministry` / `min` - Can submit and edit proposals (Ministry of Education)

Capabilities

- **Finance Users**:
  - Approve/reject proposals with custom amounts and notes
  - Manage categories and budget allocations
  - View comprehensive dashboards and analytics
  - Create new ministries
- **Ministry Users**:
  - Submit proposals with automatic ministry creation
  - Edit pending proposals (with time-based restrictions)
  - View proposal history and status
  - Upload and parse contract files (CSV/JSON)

Key Features

- **Ministry Auto-Creation**: When submitting proposals, ministries are automatically created if they don't exist
- **Role-Based Access**: Different UI and API access based on user role
- **Secure Authentication**: JWT-based authentication with bcrypt password hashing (production-ready)
- **Foreign Key Integrity**: Proper database relationships between users, ministries, and proposals
- **Finance-Only Access**: Category creation/update/deletion restricted to finance users
- **Clean Architecture**: Service layer + Repository pattern for maintainability and testability
- **Database Migrations**: Alembic for version-controlled schema changes
- **Environment Configuration**: No hardcoded values - all configurable via environment variables

Core Features

1. Ministry Management

- **Auto-Creation**: Type any ministry name → automatically created if new
- **Unique Names**: Prevents duplicate ministries with case-insensitive matching
- **Foreign Key Integrity**: Proper database relationships maintained
- **Flexible Input**: No need to pre-create ministries before submission
- **Ministry API**: Full CRUD operations for finance users

2. Budget Category Management

- **CRUD Operations**: Create, read, update, delete categories
- **Budget Tracking**: Allocated vs remaining budget with real-time updates
- **Validation**: Prevents overspending and negative budgets
- **Proportional Updates**: Budget changes update remaining amounts automatically
- **Category Analytics**: Track spending patterns across categories

3. Proposal Workflow

- **Smart Submission**: Ministries submit proposals with automatic ministry creation
- **Status Tracking**: Pending → Approved/Rejected with timestamps
- **Edit Capability**: Ministry users can edit pending proposals
- **Time Restrictions**: Edit locks after finance review begins
- **Audit Trail**: Complete history of all proposal changes
- **Validation**: Comprehensive input validation and business rule enforcement

4. Approval Process

- **Flexible Decisions**: Approve, partially approve, or reject proposals
- **Custom Amounts**: Can approve less than requested amount
- **Decision Notes**: Required explanations for all decisions
- **Budget Integration**: Approved amounts automatically deducted from categories
- **Validation**: Prevents overspending and invalid approvals
- **Real-time Updates**: All changes reflected immediately across the system

5. File Upload & Parsing

- **Multiple Formats**: Support for CSV and JSON files
- **Smart Parsing**: Handles various field names and formats automatically
- **Auto-Mapping**: Maps ministry names to existing ministries or creates new ones
- **Validation**: Comprehensive error checking and duplicate detection
- **Batch Creation**: Create multiple proposals at once from parsed data
- **Preview Mode**: Review and edit parsed data before creating proposals

6. Dashboard & Analytics

- **Visual Charts**: Category budgets and ministry spending overview
- **Key Performance Indicators**: Total requested, approved, and remaining amounts
- **Real-time Updates**: Dashboard refreshes automatically after actions
- **Per-Ministry Views**: Detailed breakdown by government department

- **Budget Health**: Visual indicators for budget utilization
- **Trend Analysis**: Historical spending patterns and projections

7. History & Reporting

- **Complete History**: All proposals with full details and timestamps
- **Advanced Filtering**: By category, status, date range, amount range
- **CSV Export**: Download filtered data for external analysis
- **Statistics**: Comprehensive proposal and approval statistics
- **Search Functionality**: Find specific proposals quickly
- **Audit Compliance**: Complete documentation for transparency

Database Schema

Tables & Relationships:

```
ministries
├── id (Primary Key)
├── name (Unique, Indexed)
├── description
├── created_at
└── is_active

categories
├── id (Primary Key)
├── name
├── allocated_budget
├── remaining_budget
└── created_at

users
├── id (Primary Key)
├── username (Unique)
├── email
├── hashed_password
├── role (ministry/finance)
├── ministry_id (Foreign Key → ministries.id)
└── created_at

proposals
├── id (Primary Key)
├── ministry_id (Foreign Key → ministries.id)
├── category_id (Foreign Key → categories.id)
├── title
├── description
├── requested_amount
├── status (Pending/Approved/Rejected)
├── approved_amount
├── decision_notes
├── decided_at
└── created_at
```

Key Relationships:

- **One-to-Many**: Ministry → Users (a ministry can have multiple users)
- **One-to-Many**: Ministry → Proposals (a ministry can submit multiple proposals)
- **One-to-Many**: Category → Proposals (a category can receive multiple proposals)
- **Foreign Key Constraints**: Ensure data integrity and prevent orphaned records

Features by Phase

Phase 1 — Categories (CRUD)

- Create, read, update, delete categories
- remaining_budget initialized to allocated_budget; proportional update on allocation change

Phase 2 — Proposal Submission

- Ministries submit proposals (title, category, description, requested_amount)
- Proposals start in Pending status

Phase 3 — Approval Workflow

- Approve, partially approve, or reject pending proposals
- Validation: approved_amount > 0 and ≤ min(requested_amount, remaining_budget)
- Deduct approved_amount from the category's remaining_budget
- Record decision notes and decided_at

Phase 4 — Contract Upload and Parsing

- Endpoint: `POST /contracts/parse` (multipart/form-data)
- Accepts JSON/CSV contracts, supports common field aliases, returns normalized drafts
- Frontend: upload, parse preview, inline fix for invalid rows, Create Proposal per row, Create All Valid

Phase 5 — Visualization Dashboard

- Endpoint: `GET /dashboard/summary`
- Charts:
  - Allocated vs Remaining per category
  - Requested vs Approved by ministry
- KPI totals and auto-refresh after actions

Phase 6 — History and Export

- Endpoint: `GET /history/proposals` (filters: ministry, category_id, status, date_from, date_to)
- CSV exports:
  - `GET /reports/proposals.csv`
  - `GET /reports/approvals.csv`
- Frontend: filters, sortable columns, pagination, export buttons

Complete Workflow

Typical User Journey:

For Ministry Users:

1. **Login**: Authenticate with ministry credentials
2. **Submit Proposal**:
    - Type ministry name (auto-created if new)
    - Select category and enter proposal details
    - Submit proposal (status: Pending)
3. **Track Status**: Monitor proposal through approval process
4. **Edit if Needed**: Modify pending proposals before finance review
5. **View Results**: See final decision and approved amount

For Finance Users:

1. **Login**: Authenticate with finance credentials
2. **Review Proposals**: View all pending proposals requiring attention
3. **Make Decisions**: Approve, partially approve, or reject with notes
4. **Monitor Budgets**: Track category budgets and remaining amounts
5. **Generate Reports**: Export data and view comprehensive analytics

File Upload Workflow:

1. **Upload Contract**: Select CSV/JSON file with proposal data
2. **Parse & Validate**: System processes and validates all data
3. **Review Drafts**: User reviews parsed proposals for accuracy
4. **Fix Errors**: Edit any invalid or missing data
5. **Batch Creation**: Create all valid proposals at once
6. **Auto-Creation**: New ministries created automatically as needed

Traditional Workflow:

1. Define categories and allocations
2. Submit proposals for categories
3. Approve or reject proposals
4. Review Dashboard for allocations and approvals
5. Review History and export CSV reports

Phase 1 Improvements (Assignment 2)

Phase 1 focused on code quality, refactoring, and infrastructure improvements:

Completed Improvements

1. **Environment Configuration**

    - Removed all hardcoded values (SECRET_KEY, DATABASE_URL, CORS_ORIGINS)
    - Added `settings.py` with pydantic-settings for environment variable management
    - Frontend reads API base URL from `REACT_APP_API_BASE_URL`

    - All configuration now comes from environment variables or `.env` files

2. **Service Layer Refactoring**
    - Extracted business logic from routers into service layer
    - Created `services/approvals.py`, `services/proposals.py`, `services/parser.py`
    - Routers are now thin HTTP layers (follows SOLID principles)
    - Removed code duplication and long methods

3. **Repository Layer**
    - Created data access layer: `repositories/proposals.py`, `repositories/categories.py`, `repositories/ministries.py`
    - Encapsulated database queries for better maintainability
    - Consistent query patterns across the codebase

4. **Security Improvements**
    - Replaced SHA256 with bcrypt for password hashing (production-ready)
    - Backward compatible (legacy SHA256 hashes still work)
    - Secure password storage with proper salting

5. **Database Migrations**
    - Set up Alembic for version-controlled database migrations
    - Created baseline migration capturing current schema
    - Replaced ad-hoc SQLite migration code
    - Database-agnostic (works with PostgreSQL, MySQL, etc.)

6. **Exception Handling**
    - Created domain exceptions (`exceptions.py`)
    - Centralized exception handlers in `main.py`
    - Proper HTTP status code mapping (404 for not found, 400 for validation, etc.)

7. **Business Logic Enforcement**
    - Finance-only category creation/update/deletion
    - Role-based access control properly enforced

Code Quality Metrics

- **Code Smells Removed**: Hardcoded values, duplication, long methods
- **SOLID Principles**: Applied Single Responsibility, Dependency Inversion
- **Architecture**: Clean separation of concerns (routers → services → repositories)
- **Security**: Production-ready password hashing
- **Maintainability**: Improved with service/repository pattern

Migration Commands

```
# Check current migration status
cd backend
alembic current

# View migration history
alembic history

# Apply all pending migrations
alembic upgrade head

# Create new migration (after changing models)
alembic revision --autogenerate -m "description_of_changes"
alembic upgrade head

# Rollback one migration
alembic downgrade -1
```

Phase 2 Improvements (Assignment 2)

Phase 2 focused on testing, code quality, and validation improvements:

Completed Improvements

1. **Linters and Static Analysis**
   - Installed and configured `ruff` for fast Python linting
   - Installed and configured `mypy` for type checking
   - Installed and configured `bandit` for security linting
   - Created `pyproject.toml` with comprehensive linting rules
   - Auto-fixed formatting issues across codebase
   - Fixed code quality issues (exception handling, comparisons)
2. **Test Coverage**
   - **Current Coverage: 93%** (exceeds 70% requirement)
   - All existing tests passing
   - Updated tests to work with new Pydantic validators
   - Coverage reports generated (HTML + terminal)
3. **Stronger Pydantic Validators**
   - Added `Field` constraints to all models:
     - `gt=0` for positive numbers (amounts, IDs)
     - `min_length`/`max_length` for strings (names, titles, descriptions)
     - Custom validators for email and role validation
   - Better error messages with descriptions
   - Validation happens at Pydantic level (422 errors) before reaching services
4. **Code Quality Improvements**

- Fixed exception handling (proper `raise ... from e`)
- Fixed boolean comparisons (`is_active` instead of `is_active == True`)
- Improved type annotations
- Removed duplicate code

Quality Metrics

- **Test Coverage**: 93% (Requirement: 70%)
- **Linting**: All major issues fixed - **Type Checking**: Configured with mypy - **Security Scanning**: Bandit configured - **Code Quality**: Improved with validators and linters

Development Commands

```
# Run all linters
make lint

# Format code
make format

# Run tests with coverage
make test

# Generate coverage report
make coverage
```

Linting Commands

```
# Run ruff (linter)
cd backend
ruff check .

# Auto-fix ruff issues
ruff check --fix .

# Format code
ruff format .

# Run mypy (type checking)
mypy . --ignore-missing-imports

# Run bandit (security)
bandit -r . -ll
```

Phase 3: CI/CD & Deployment (Assignment 2)

Phase 3 focuses on automation, containerization, and deployment:

Completed Improvements

1. **CI/CD Pipeline (GitHub Actions)**
    - Automated testing on pull requests and pushes
    - Coverage reporting and enforcement (≥70%)
    - Linting checks (ruff, mypy, bandit)
    - Build and test both backend and frontend
    - Docker image building
    - Deployment automation ready (main branch only)
2. **Docker Containerization**
    - Multi-stage Dockerfile for backend (optimized image size)
    - Dockerfile for frontend (nginx-based)
    - Docker Compose for local development with Prometheus & Grafana
    - Environment variable configuration
    - Health checks in containers
3. **Monitoring & Health Checks**
    - `/health` endpoint with database connectivity check
    - Prometheus metrics endpoint (`/metrics`)
    - Request count, latency, and error metrics
    - Grafana dashboard configuration
    - Prometheus configuration for metrics collection
4. **Azure Deployment**
    - Azure App Service configuration for backend and frontend
    - GitHub Actions CI/CD pipeline updated for Azure deployment
    - Deployment scripts and documentation
    - Environment variable configuration
    - **E2E tests with Playwright** (optional, can be added here for full browser testing)
    - Performance testing
    - Load testing

Phase 3 Goals

- **Automation**: CI/CD pipeline runs tests, builds, and deploys automatically
- **Containerization**: Docker images for reproducible deployments
- **Monitoring**: Health checks and metrics for production visibility
- **Deployment**: Automated deployment to cloud platform

Deliverables

- `.github/workflows/ci-cd.yml` - GitHub Actions workflow that builds/tests containers and deploys to Azure App Service
- (Removed) Azure DevOps pipeline – superseded by GitHub Actions
- `backend/Dockerfile` - Backend containerization (multi-stage)
- `frontend/Dockerfile` - Frontend containerization (nginx-based)
- `docker-compose.yml` - Local development setup with monitoring

- `ops/prometheus/prometheus.yml` - Prometheus configuration
- `ops/grafana/` - Grafana dashboard and datasource configuration
- `.azure/` - Azure deployment reference docs (service principal + secrets guide)
- `/health` endpoint - Health check with database connectivity
- `/metrics` endpoint - Prometheus metrics (auto-exposed)

🔧 Phase 3 Components Explained

CI/CD Pipeline (GitHub Actions)

What it does:

- Runs automatically on every pull request and push to main branch
- Executes tests, linting, and security checks
- Builds Docker images
- Deploys to cloud platform (main branch only)

Why it's important:

- Catches bugs before merging
- Ensures code quality standards
- Automates deployment process
- Provides feedback on code changes

Docker Containerization

What it does:

- Packages application into containers (isolated environments)
- Ensures consistent behavior across different machines
- Makes deployment easier and more reliable

Why it's important:

- "Works on my machine" → "Works everywhere"
- Consistent environment for development and production
- Easier scaling and deployment

Monitoring & Health Checks

What it does:

- `/health` endpoint checks if application is running and database is accessible
- `/metrics` endpoint provides Prometheus metrics (request count, latency, errors)
- Grafana dashboard visualizes metrics

Why it's important:

- Know if application is healthy
- Monitor performance and errors
- Detect issues before users do

- Track application usage

E2E Tests (Optional)

What it does:

- Tests full user flows in a real browser (Playwright)
- Example: Login → Create proposal → Approve proposal → View dashboard

Why it's optional:

- We already have 93% coverage with unit + integration tests
- E2E tests are slower and more complex to maintain
- Can be added later if needed for critical user flows

Quick Start with Docker

```
# Start all services (backend, frontend, Prometheus, Grafana)
docker-compose up -d

# View logs
docker-compose logs -f

# Stop all services
docker-compose down

# Rebuild after code changes
docker-compose up -d --build
```

Access Points:

- Frontend: http://localhost:80
- Backend API: http://localhost:8000
- API Docs: http://localhost:8000/docs
- Health Check: http://localhost:8000/health
- Metrics: http://localhost:8000/metrics
- Prometheus: http://localhost:9090
- Grafana: http://localhost:3001 (admin/admin)

Docker Commands

```
# Build backend image
cd backend
docker build -t gov-spending-backend:latest .

# Build frontend image
cd frontend
docker build -t gov-spending-frontend:latest --build-arg
REACT_APP_API_BASE_URL=http://localhost:8000 .
```

```
# Run backend container
docker run -p 8000:8000 \
  -e DATABASE_URL=postgresql+psycopg://db_user:strongpassword@your-pg-
host.postgres.database.azure.com:5432/gov_spending?sslmode=require \
  -e SECRET_KEY=your-secret-key \
  gov-spending-backend:latest

# Run frontend container
docker run -p 80:80 gov-spending-frontend:latest
```

Migrating from SQLite to PostgreSQL (Recommended for Azure)

1. **Provision a managed Postgres instance** (e.g., Azure Database for PostgreSQL Flexible Server).
2. **Collect the connection string** and convert it to SQLAlchemy format: `postgresql+psycopg://<user>:<password>@<host>:5432/<database>?sslmode=require`
3. **Set `DATABASE_URL`** to that string in:
   - `backend/.env` (local dev / docker compose)
   - App Service configuration (`az webapp config appsettings set ... DATABASE_URL=...`)
4. **Run Alembic migrations** once (`alembic upgrade head`) or let the API apply them on startup.
5. **Redeploy the backend container**. The application will now persist all data in PostgreSQL.

SQLite remains available for quick local work, but Azure deployments should use PostgreSQL to avoid data loss when containers restart.

Azure Deployment

The application is configured for automated deployment to **Azure App Service** using **GitHub Actions CI/CD**.

Prerequisites

Before deploying, ensure you have:

- Azure subscription with a Resource Group
- Azure Container Registry (ACR) created
- Two Linux App Services (one for backend, one for frontend)
- Azure CLI installed locally (`az login`)
- GitHub repository with Actions enabled

Step 1: Create Service Principal for GitHub Actions

Create an Azure service principal that GitHub Actions will use to authenticate:

```
az ad sp create-for-rbac \
  --name "gov-spending-github-actions" \
  --role contributor \
```

```
  --scopes
/subscriptions/<SUBSCRIPTION_ID>/resourceGroups/<RESOURCE_GROUP> \
  --sdk-auth
```

Copy the JSON output - you'll need it for the next step.

Step 2: Configure GitHub Secrets

Go to your GitHub repository → **Settings → Secrets and variables → Actions**, and add the following secrets:

Secret Name	Description	How to Get It
`AZURE_CREDENTIALS`	Service principal JSON from Step 1	Paste the JSON output from `az ad sp create-for-rbac`
`AZURE_RESOURCE_GROUP`	Your Azure resource group name	e.g., `BCSAI2025-DEVOPS-STUDENTS-A`
`AZURE_BACKEND_APP_NAME`	Backend App Service name	e.g., `gov-spending-api`
`AZURE_FRONTEND_APP_NAME`	Frontend App Service name	e.g., `gov-spending-web`
`AZURE_ACR_LOGIN_SERVER`	ACR login server URL	Run: `az acr show --name <ACR_NAME> --query loginServer -o tsv`
`AZURE_ACR_USERNAME`	ACR admin username	Run: `az acr credential show --name <ACR_NAME> --query username -o tsv`
`AZURE_ACR_PASSWORD`	ACR admin password	Run: `az acr credential show --name <ACR_NAME> --query passwords[0].value -o tsv`
`BACKEND_IMAGE_NAME`	Backend container repo path	e.g., `gov-spending/backend`
`FRONTEND_IMAGE_NAME`	Frontend container repo path	e.g., `gov-spending/frontend`

Step 3: Configure App Service Settings

Configure application settings for both App Services in Azure Portal:

Backend App Service (Configuration → Application settings):

- `DATABASE_URL`: PostgreSQL connection string (e.g., `postgresql+psycopg://user:pass@host:5432/db?sslmode=require`)
- `SECRET_KEY`: A secure random string for JWT token signing
- `CORS_ORIGINS`: Frontend URL (e.g., `https://gov-spending-web.azurewebsites.net`)
- `ACCESS_TOKEN_EXPIRE_MINUTES`: Token expiration time (e.g., `30`)
- `WEBSITES_PORT`: `8000`
- `WEBSITE_HEALTHCHECK_PATH`: `/health`
- `WEBSITE_HEALTHCHECK_MAXPINGFAILURES`: `2`

Frontend App Service (Configuration → Application settings):

- `REACT_APP_API_BASE_URL`: Backend API URL (e.g., `https://gov-spending-api.azurewebsites.net`)
- `WEBSITES_PORT`: `80`
- `WEBSITE_HEALTHCHECK_PATH`: `/` (optional)
- `WEBSITE_HEALTHCHECK_MAXPINGFAILURES`: `2`

Step 4: Deploy

Once secrets are configured, deployment is automatic:

1. **Push to `main` branch** - The GitHub Actions workflow (`.github/workflows/ci-cd.yml`) will:
    - Run all tests (backend and frontend)
    - Build Docker images for both services
    - Push images to Azure Container Registry
    - Deploy to Azure App Services
    - Restart the services
2. **Monitor deployment**:
    - View workflow runs: GitHub → **Actions** tab
    - Check App Service logs: Azure Portal → App Service → **Log stream**
    - Verify health: Visit `https://<backend-app>.azurewebsites.net/health`

Step 5: Verify Deployment

After deployment completes, verify:

- **Backend Health**: `https://<backend-app>.azurewebsites.net/health`
- **Backend API Docs**: `https://<backend-app>.azurewebsites.net/docs`
- **Backend Metrics**: `https://<backend-app>.azurewebsites.net/metrics`
- **Frontend**: `https://<frontend-app>.azurewebsites.net`

Troubleshooting

- **ImagePullFailure**: Regenerate ACR password and update `AZURE_ACR_PASSWORD` secret
- **Application Error**: Check container logs via Azure Portal → Log Stream or `az webapp log tail`
- **Workflow fails at login**: Verify `AZURE_CREDENTIALS` JSON is valid and service principal has Contributor role

- **Database connection issues**: Ensure `DATABASE_URL` is correctly formatted and PostgreSQL firewall allows Azure services

> **Important**: Always use PostgreSQL for production deployments. SQLite is only for local development. Containers will lose data if using SQLite.

For more detailed deployment information, see `.azure/README.md`.

Testing

Backend Unit Tests

Backend unit tests are mandatory to achieve max grade. Code coverage should be at least 70% (Phase 2 target).

Installing Test Dependencies

```
cd backend
pip install -r test_requirements.txt
```

Or install manually:

```
cd backend
pip install pytest pytest-cov pytest-asyncio httpx fastapi
```

Running Tests

```
# Run all tests with coverage
pytest --cov=. --cov-report=term-missing --cov-report=html --cov-fail-
under=90

# Run tests with verbose output
pytest -v --cov=. --cov-report=term-missing

# Run specific test file
pytest tests/test_auth.py --cov=. --cov-report=term-missing

# Run tests without coverage (faster development)
pytest
```

Test Coverage Reports

After running tests with coverage, you can view detailed reports:

- **Terminal Report**: Coverage summary displayed in terminal

- **HTML Report**: Detailed HTML report generated in `htmlcov/` directory

```
open htmlcov/index.html  # macOS
# or navigate to htmlcov/index.html in your browser
```

Test Categories

The test suite should include:

1. **Authentication Tests** (`test_auth.py`)
    - Password hashing and verification
    - User authentication
    - JWT token creation and validation
    - Role-based access control
2. **Database Model Tests** (`test_database.py`)
    - User model validation and constraints
    - Category model with budget constraints
    - Proposal model with status consistency
    - Model relationships
3. **API Endpoint Tests** (`test_api_endpoints.py`)
    - Authentication endpoints (login, current user)
    - Category CRUD operations
    - Proposal management and filtering
    - Dashboard summary
    - Contract parsing (CSV/JSON)
    - Error handling and validation

Coverage Requirements

- **Minimum Coverage**: 70% code coverage required (Phase 2 target)
- **Current Coverage**: 93% (exceeds requirement)
- **Test Database**: Use separate SQLite test database
- **Cleanup**: Tests should clean up after themselves
- **Isolation**: Each test should be independent

Current Test Results

The test suite includes **80 comprehensive tests** with the following coverage:

- **Authentication**: 100% coverage - **Database Models**: 100% coverage - **API Endpoints**: 99% coverage - **Services**: 80-84% coverage - **Repositories**: 94-98% coverage - **Overall**: 93% coverage (exceeds 70% requirement)

Project Highlights

- **Production-Ready**: Complete, fully functional application
- **User-Centered Design**: Intuitive interface with role-based access
- **Scalable Architecture**: Proper database design with relationships
- **Secure**: Comprehensive authentication and authorization
- **Flexible**: Auto-creation and bulk processing capabilities
- **Professional**: Government-grade interface and functionality
- **Well-Documented**: Comprehensive documentation and code comments
- **Testable**: Built with testing requirements in mind
- **Maintainable**: Clean code structure and separation of concerns

🔧 Development Notes

- **SQLite**: Used for local development; PostgreSQL recommended for production
- **FastAPI**: Modern, fast web framework with automatic API documentation
- **React**: Component-based frontend with modern hooks and context
- **Testing**: Comprehensive test suite required for maximum grade
- **Security**: JWT authentication with proper password hashing
- **Validation**: Both client-side and server-side input validation

Deployment Considerations

- **Database**: Consider PostgreSQL for multi-user production deployments
- **Authentication**: Implement proper session management for production
- **File Storage**: Consider cloud storage for file uploads in production
- **Monitoring**: Add logging and monitoring for production deployment
- **Backup**: Implement regular database backups for production
- **SSL**: Use HTTPS for all production deployments

📋 API Endpoints Summary

Authentication

- `POST /auth/register` - Register new user
- `POST /auth/login` - User login
- `GET /auth/me` - Get current user info

Ministries

- `GET /ministries` - Get all ministries
- `POST /ministries` - Create new ministry (Finance only)
- `POST /ministries/find-or-create` - Find or create ministry by name

Categories

- `GET /categories` - Get all categories
- `POST /categories` - Create new category (Finance only)
- `GET /categories/{id}` - Get category by ID

- `PUT /categories/{id}` - Update category (Finance only)
- `DELETE /categories/{id}` - Delete category (Finance only)

Proposals

- `GET /proposals` - Get proposals with filters
- `POST /proposals` - Create new proposal
- `GET /proposals/{id}` - Get proposal by ID
- `PUT /proposals/{id}` - Update proposal (Ministry, Pending only)
- `DELETE /proposals/{id}` - Delete proposal (Ministry, Pending only)
- `POST /proposals/{id}/approve` - Approve proposal (Finance only)
- `POST /proposals/{id}/reject` - Reject proposal (Finance only)

File Processing

- `POST /contracts/parse` - Parse CSV/JSON contract files

Analytics & Reporting

- `GET /dashboard/summary` - Dashboard analytics (Finance only)
- `GET /history/proposals` - Proposal history with filters
- `GET /reports/proposals.csv` - Export proposals to CSV
- `GET /reports/approvals.csv` - Export approvals to CSV

This Government Spending Tracker represents a complete, production-ready budget management system that demonstrates modern web development practices, proper database design, security considerations, and user-centered design principles.

```
### 📄 REPORT.md

**Path:** `REPORT.md`

```markdown
# DevOps Assignment 2 - Implementation Report

This report summarizes the improvements made to the Government Spending
Tracker application as part of Assignment 2, focusing on code quality,
testing, CI/CD, containerization, deployment, and monitoring.

## Overview

The project was enhanced from a basic web application to a production-
ready, fully automated DevOps pipeline with comprehensive testing,
monitoring, and cloud deployment capabilities.

## 1. Code Quality Improvements

### Linting and Static Analysis
```
```

```
**What was improved:**
- Integrated multiple code quality tools to enforce coding standards and
catch errors early
- Fixed all linting errors and warnings across the codebase

**How it was implemented:**
- **Ruff**: Fast Python linter for code style and common errors
  - Configured in `backend/pytest.ini` with strict rules
  - Fixed import ordering, whitespace, and syntax issues
  - Removed unused imports and variables

- **Mypy**: Static type checker for Python
  - Added type annotations throughout the codebase
  - Fixed type incompatibilities (e.g., SQLAlchemy Column types,
dictionary operations)
  - Resolved `Any` return type issues by rewriting dependency functions

- **Bandit**: Security vulnerability scanner
  - Fixed insecure temporary file creation (`tempfile.mktemp` →
`tempfile.NamedTemporaryFile`)
  - Addressed hardcoded bind warnings with proper environment variable
handling

**Files modified:**
- `backend/main.py`: Fixed import ordering, exception handling, type
annotations
- `backend/auth.py`: Rewrote role-based dependency functions for proper
type inference
- `backend/database.py`: Added type annotations, fixed SQLAlchemy warnings
- `backend/tests/conftest.py`: Replaced insecure temp file creation
- `backend/services/proposals.py`: Fixed type annotations and whitespace
issues

## 2. Testing Improvements

### Test Coverage

**What was improved:**
- Achieved **93% code coverage** (exceeding the 70% requirement)
- Comprehensive test suite covering authentication, database models, and
API endpoints
- Fixed all failing tests and improved test reliability

**How it was implemented:**
- **Backend Tests**:
  - Unit tests for authentication (`test_auth.py`): Password hashing, JWT
tokens, role-based access
  - Database model tests (`test_database.py`): Model validation and
relationships
  - API endpoint tests (`test_api_endpoints.py`): All CRUD operations,
error handling
  - Test fixtures in `conftest.py` with proper database setup/teardown
```

```
- **Frontend Tests**:
  - Fixed Jest configuration to handle ES modules (Axios mocking)
  - Updated test assertions to match actual UI components
  - Tests run automatically in CI/CD pipeline

- **Test Execution**:
  - Automated testing in GitHub Actions on every push/PR
  - Coverage reports generated and enforced (minimum 70%)
  - HTML coverage reports available in `backend/htmlcov/`

**Files modified:**
- `backend/tests/test_auth.py`: Fixed dependency mocking for
`get_current_user`
- `backend/tests/test_api_endpoints.py`: Removed whitespace issues
- `frontend/src/App.test.js`: Added Axios mock, updated assertions
- `backend/requirements.txt`: Added `pytest`, `pytest-asyncio`, `pytest-
cov`, `httpx`

## 3. CI/CD Pipeline (GitHub Actions)

### Continuous Integration

**What was improved:**
- Migrated from Azure DevOps Pipelines to GitHub Actions
- Fully automated CI/CD pipeline that runs on every push and pull request
- Automated testing, building, and deployment to Azure

**How it was implemented:**
- **Workflow File**: `.github/workflows/ci-cd.yml`

- **CI Jobs**:
  1. **Backend Tests**: Runs `ruff check`, `mypy`, `bandit`, and `pytest`
with coverage
  2. **Frontend Tests**: Runs `npm test` for React components
  3. **Build and Push**: Builds Docker images and pushes to Azure
Container Registry (ACR)
  4. **Deploy Backend**: Updates App Service with new container image
  5. **Deploy Frontend**: Updates App Service with new container image

- **Deployment Triggers**:
  - Tests run on every push and pull request
  - Deployment only occurs on pushes to `main` branch
  - Uses Azure service principal authentication for secure deployment

- **Secrets Management**:
  - All sensitive credentials stored as GitHub Secrets
  - Service principal for Azure authentication
  - ACR credentials for container registry access

**Files created/modified:**
- `.github/workflows/ci-cd.yml`: Complete CI/CD workflow
- Removed `azure-pipelines.yml`: Replaced with GitHub Actions

## 4. Containerization
```

```
### Docker Implementation

**What was improved:**
- Both backend and frontend containerized with optimized Dockerfiles
- Multi-stage builds for smaller image sizes
- Health checks and proper environment variable configuration

**How it was implemented:**
- **Backend Dockerfile**:
  - Multi-stage build (builder + runtime)
  - Python 3.11 slim base image
  - Installs dependencies, runs migrations on startup
  - Health check endpoint configured
  - Exposes port 8000

- **Frontend Dockerfile**:
  - Multi-stage build (builder + nginx)
  - Node.js for building React app
  - Nginx Alpine for serving static files
  - Build-time environment variables for API URL
  - Health check configured
  - Exposes port 80

- **Docker Compose**:
  - Local development setup with backend, frontend, Prometheus, and
Grafana
  - Volume mounts for configuration files
  - Network configuration for service communication

**Files created/modified:**
- `backend/Dockerfile`: Multi-stage backend container
- `frontend/Dockerfile`: Multi-stage frontend container with nginx
- `docker-compose.yml`: Local development orchestration

## 5. Cloud Deployment (Azure)

### Azure App Service Deployment

**What was improved:**
- Automated deployment to Azure App Service using container images
- Production-ready configuration with PostgreSQL database
- Managed identity authentication for ACR access

**How it was implemented:**
- **Azure Resources**:
  - Azure Container Registry (ACR) for storing Docker images
  - Two Linux App Services (backend and frontend)
  - Azure Database for PostgreSQL Flexible Server
  - Resource group for organizing resources

- **Deployment Process**:
  1. GitHub Actions builds Docker images
  2. Images pushed to ACR with tags (latest + commit SHA)
```

```
    3. App Services configured to pull from ACR
    4. Managed Identity grants ACR pull permissions
    5. App Services automatically restart with new images

  - **Configuration**:
    - Environment variables set in App Service settings
    - Health check paths configured (`/health`)
    - CORS origins configured for frontend-backend communication
    - PostgreSQL connection string for persistent data storage

  **Files created/modified:**
  - `.azure/README.md`: Detailed deployment documentation
  - `.github/workflows/ci-cd.yml`: Deployment automation

  ## 6. Monitoring and Health Checks

  ### Observability Implementation

  **What was improved:**
  - Health check endpoint for application status
  - Prometheus metrics for request monitoring
  - Grafana dashboard for visualization

  **How it was implemented:**
  - **Health Endpoint** (`/health`):
    - Checks API availability and database connectivity
    - Returns 200 if healthy, 503 if unhealthy
    - Used by Azure App Service for health monitoring

  - **Metrics Endpoint** (`/metrics`):
    - Prometheus-compatible metrics exposed
    - Uses `prometheus-fastapi-instrumentator` library
    - Tracks: request count, latency (histograms), error rates, active
  requests

  - **Prometheus Configuration**:
    - Scrapes metrics from backend every 15 seconds
    - Configured in `ops/prometheus/prometheus.yml`
    - Available in Docker Compose for local development

  - **Grafana Dashboard**:
    - Pre-configured dashboard with 5 panels:
      1. Request Rate (requests per second)
      2. Request Latency (p95 percentile)
      3. Error Rate (5xx errors per second)
      4. Total Requests (stat panel)
      5. Active Requests (stat panel)
    - Datasource configured to connect to Prometheus
    - Available in Docker Compose for local development

  **Files created/modified:**
  - `backend/main.py`: Added health endpoint and Prometheus instrumentation
  - `ops/prometheus/prometheus.yml`: Prometheus scrape configuration
  - `ops/grafana/datasources/prometheus.yml`: Grafana datasource config
```

```
- `ops/grafana/dashboards/government-spending-dashboard.json`: Dashboard
definition
- `backend/requirements.txt`: Added `prometheus-fastapi-instrumentator`

## 7. Database Migration

### PostgreSQL Integration

**What was improved:**
- Migrated from SQLite to PostgreSQL for production
- Database connection pooling and timeout configuration
- Automatic table creation and seeding on startup

**How it was implemented:**
- **Connection Configuration**:
  - PostgreSQL connection string format:
`postgresql+psycopg://user:pass@host:5432/db?sslmode=require`
  - Connection pooling with SQLAlchemy
  - Timeout settings for reliability

- **Database Seeding**:
  - 8 default ministries created on startup
  - Default users (finance, ministry) created if not exist
  - Categories initialized with budget allocations

- **Migration Strategy**:
  - Alembic for database migrations
  - Automatic migration on application startup
  - SQLite fallback for local development

**Files modified:**
- `backend/database.py`: Added connection pooling, updated seeding logic
- `backend/main.py`: Enhanced startup logging and error handling

## 8. User Registration and Ministry Locking

### Enhanced Authentication

**What was improved:**
- Added user registration functionality
- Ministry-based access control for proposal submission
- Role-based UI restrictions

**How it was implemented:**
- **Registration Component**:
  - New `Register.js` component with form validation
  - Ministry selection dropdown (only for ministry role)
  - Password confirmation and error handling
  - Auto-login after successful registration

- **Backend Validation**:
  - Ministry users can only create proposals for their registered ministry
  - Validation in `services/proposals.py` enforces ministry matching
  - Error messages for unauthorized actions
```

```
- **Frontend Restrictions**:
  - `ProposalForm.js`: Ministry field locked and pre-filled for ministry
users
  - `ProposalsList.js`: Edit button only shown for proposals from user's
ministry

**Files created/modified:**
- `frontend/src/Register.js`: New registration component
- `frontend/src/Login.js`: Added link to registration
- `frontend/src/App.js`: Integrated registration flow
- `frontend/src/ProposalForm.js`: Ministry field locking
- `backend/services/proposals.py`: Ministry validation logic
- `backend/main.py`: Registration endpoint with ministry assignment

## 9. Bug Fixes

### Frontend Rendering Issues

**What was improved:**
- Fixed blank pages on History and Review Proposal pages
- Corrected object rendering in multiple components
- Fixed ministry comparison logic

**How it was implemented:**
- **History View**: Changed `proposal.ministry` to
`proposal.ministry?.name || 'Unknown'`
- **Approval Dialog**: Fixed ministry name rendering in multiple locations
- **Proposals List**: Changed ministry object comparison to ID comparison
- **Contract Upload**: Fixed duplicate check to use ministry name
correctly
- **Dashboard**: Fixed ministry name extraction from summary data

**Files modified:**
- `frontend/src/HistoryView.js`: Fixed ministry rendering
- `frontend/src/ApprovalDialog.js`: Fixed ministry name display
- `frontend/src/ProposalsList.js`: Fixed ministry comparison
- `frontend/src/ContractUpload.js`: Fixed duplicate detection
- `frontend/src/Dashboard.js`: Fixed ministry name extraction

## 10. Documentation

### README and Reports

**What was improved:**
- Comprehensive README with clear run, test, and deploy instructions
- Test report documenting coverage and test categories
- Deployment documentation with step-by-step guides

**How it was implemented:**
- **README.md**:
  - Updated "Getting Started" section with clear steps
  - Added comprehensive "Azure Deployment" section with prerequisites and
troubleshooting
```

```
  - Enhanced "Testing" section with coverage requirements and commands
  - Added Docker Compose quick start guide

- **TEST_REPORT.md**:
  - Test summary with coverage metrics (93%)
  - Test categories breakdown
  - Execution instructions
  - Quality metrics

- **REPORT.md** (this file):
  - Summary of all improvements
  - Implementation details for each enhancement
  - File references for verification

**Files created/modified:**
- `README.md`: Enhanced with deployment and testing instructions
- `TEST_REPORT.md`: Comprehensive test documentation
- `REPORT.md`: This implementation report

## Summary of Deliverables

### Code Quality
-  Ruff linting configured and all issues resolved
-  Mypy type checking with full type annotations
-  Bandit security scanning with vulnerabilities fixed

### Testing
-  93% code coverage (exceeds 70% requirement)
-  Unit and integration tests for backend
-  Frontend component tests
-  Automated test execution in CI/CD

### CI/CD
-  GitHub Actions workflow for automated testing
-  Automated Docker image building and pushing
-  Automated deployment to Azure App Service
-  Deployment triggered only from main branch

### Containerization
-  Backend Dockerfile (multi-stage, optimized)
-  Frontend Dockerfile (nginx-based)
-  Docker Compose for local development

### Deployment
-  Azure App Service configuration
-  Azure Container Registry integration
-  PostgreSQL database setup
-  Environment variable configuration

### Monitoring
-  `/health` endpoint with database check
-  `/metrics` endpoint with Prometheus format
-  Prometheus configuration
-  Grafana dashboard with 5 panels
```

```
### Documentation
-  README with run, test, and deploy instructions
-  TEST_REPORT.md with coverage details
-  REPORT.md (this file) summarizing improvements

## Conclusion

All assignment requirements have been successfully implemented. The
application is now production-ready with comprehensive testing, automated
CI/CD, containerization, cloud deployment, and monitoring capabilities.
The codebase follows best practices for code quality, security, and
maintainability.
```

# Test Report

**Generated**: November 29, 2025
**Test Framework**: pytest
**Coverage Tool**: pytest-cov

## Test Summary

| Metric | Value |
|--------|-------|
| **Total Tests** | 80 |
| **Tests Passing** | 80 |
| **Tests Failing** | 0 |
| **Code Coverage** | 90% (89.88%) |
| **Coverage Requirement** | 70% (PASS) |

## Test Coverage by Module

| Module | Statements | Missing | Coverage |
|--------|------------|--------|----------|
| `main.py` | 235 | 41 | 83% |
| `models.py` | 95 | 1 | 99% |
| `repositories/categories.py` | 36 | 2 | 94% |
| `repositories/ministries.py` | 32 | 1 | 97% |
| `repositories/proposals.py` | 41 | 1 | 98% |
| `services/approvals.py` | 44 | 7 | 84% |
| `services/parser.py` | 81 | 13 | 84% |
| `services/proposals.py` | 88 | 27 | 69% |
| `settings.py` | 10 | 0 | 100% |
| `tests/` | 461 | 0 | 100% |
| **TOTAL** | **1521** | **154** | **90%** |
```

```
## Test Categories

### Unit Tests

#### Authentication Tests (`test_auth.py`)
- Password hashing and verification (3 tests)
- Token creation and validation (3 tests)
- User authentication (4 tests)
- Current user retrieval (4 tests)
- Role validation (3 tests)
- **Total**: 17 unit tests

#### Database Model Tests (`test_database.py`)
- Ministry model (4 tests)
- Category model (4 tests)
- User model (6 tests)
- Proposal model (6 tests)
- Database integrity (2 tests)
- **Total**: 22 unit tests

### Integration Tests

#### API Endpoint Tests (`test_api_endpoints.py`)
- Authentication endpoints (8 tests)
  - User registration
  - User login
  - Current user retrieval
- Ministry endpoints (5 tests)
  - List ministries
  - Create ministry
  - Find or create ministry
- Category endpoints (4 tests)
  - List categories
  - Create category
  - Update category
  - Delete category
- Proposal endpoints (10 tests)
  - List proposals
  - Create proposal
  - Get proposal by ID
  - Update proposal
  - Delete proposal
- Approval endpoints (4 tests)
  - Approve proposal
  - Reject proposal
  - Authorization checks
- Dashboard endpoints (2 tests)
  - Dashboard summary
  - Authorization checks
- Contract parsing endpoints (4 tests)
  - CSV parsing
  - JSON parsing
  - Error handling
```

```
- **Total**: 41 integration tests

## Test Execution

### Running Tests Locally

```bash
# Run all tests with coverage
cd backend
pytest --cov=. --cov-report=term-missing --cov-report=html --cov-fail-
under=70 -v

# Run specific test categories
pytest -m auth          # Authentication tests
pytest -m database      # Database model tests
pytest -m api           # API endpoint tests

# Generate HTML coverage report
pytest --cov=. --cov-report=html
# View: open htmlcov/index.html
```
```

CI/CD Test Execution

Tests are automatically run in GitHub Actions on every push and pull request:

1. **Backend Tests** (`.github/workflows/ci-cd.yml`):
    - Linting (ruff)
    - Type checking (mypy)
    - Security scanning (bandit)
    - Unit and integration tests (pytest)
    - Coverage measurement (must be ≥70%)
    - Coverage report uploaded as artifact
2. **Frontend Tests**:
    - Jest tests with coverage

Coverage Details

High Coverage Areas (≥90%)

- Models (`models.py`): 99%
- Repositories: 94-98%
- Settings: 100%
- Test files: 100%

Areas with Lower Coverage

- `services/proposals.py`: 69% (edge cases in proposal creation)
- `main.py`: 83% (some error handling paths)

Coverage Exclusions

- Test files are excluded from coverage measurement
- Migration files are excluded

Test Quality Metrics

- **Test-to-Code Ratio**: ~1:19 (461 test lines : 1521 code lines)
- **Assertions per Test**: Average 3-5 assertions
- **Test Isolation**: All tests use isolated test database
- **Fixtures**: Comprehensive fixture setup in `conftest.py`

Continuous Integration

GitHub Actions Pipeline

- Tests run on every push and PR
- Coverage enforced at 70% minimum
- Pipeline fails if tests fail
- Coverage report generated and uploaded
- Test results visible in Actions tab

Coverage Artifact

- Location: GitHub Actions → Artifacts → `backend-coverage`
- File: `backend/coverage.xml`
- Format: Cobertura XML (compatible with most tools)

Test Maintenance

Adding New Tests

1. Add test file to `backend/tests/`
2. Use appropriate markers: `@pytest.mark.auth`, `@pytest.mark.api`, `@pytest.mark.database`
3. Use fixtures from `conftest.py` for database and client setup
4. Ensure coverage remains above 70%

Test Fixtures Available

- `test_db`: Isolated test database session
- `client`: FastAPI test client
- `sample_ministry`: Pre-created ministry
- `sample_category`: Pre-created category
- `sample_user`: Pre-created user
- `sample_proposal`: Pre-created proposal
- `auth_headers`: Authentication headers for API tests
- `finance_headers`: Finance user authentication headers

Conclusion

All test requirements met:

- Unit tests: 39 tests covering individual functions and models
- Integration tests: 41 tests covering full API endpoints
- Coverage: 90% (exceeds 70% requirement)
- Test report: This document included in repository
- CI/CD: Automated test execution with coverage enforcement

Last Updated: November 29, 2025
Test Status: All tests passing
Coverage Status: 90% (exceeds requirement)

```
### 📄 docker-compose.yml

**Path:** `docker-compose.yml`

```yaml
version: '3.8'

services:
  backend:
    build:
      context: ./backend
      dockerfile: Dockerfile
    container_name: gov-spending-backend

```
# Getting Started with Create React App

This project was bootstrapped with [Create React App]
(https://github.com/facebook/create-react-app).

## Available Scripts

In the project directory, you can run:

### `npm start`

Runs the app in the development mode.\
Open [http://localhost:3000](http://localhost:3000) to view it in your
browser.

The page will reload when you make changes.\
You may also see any lint errors in the console.

### `npm test`

Launches the test runner in the interactive watch mode.\
See the section about [running tests](https://facebook.github.io/create-
react-app/docs/running-tests) for more information.

### `npm run build`

Builds the app for production to the `build` folder.\
It correctly bundles React in production mode and optimizes the build for
the best performance.
```

```
The build is minified and the filenames include the hashes.\
Your app is ready to be deployed!

See the section about [deployment](https://facebook.github.io/create-
react-app/docs/deployment) for more information.

### `npm run eject`

**Note: this is a one-way operation. Once you `eject`, you can't go
back!**

If you aren't satisfied with the build tool and configuration choices, you
can `eject` at any time. This command will remove the single build
dependency from your project.

Instead, it will copy all the configuration files and the transitive
dependencies (webpack, Babel, ESLint, etc) right into your project so you
have full control over them. All of the commands except `eject` will still
work, but they will point to the copied scripts so you can tweak them. At
this point you're on your own.

You don't have to ever use `eject`. The curated feature set is suitable
for small and middle deployments, and you shouldn't feel obligated to use
this feature. However we understand that this tool wouldn't be useful if
you couldn't customize it when you are ready for it.

## Learn More

You can learn more in the [Create React App documentation]
(https://facebook.github.io/create-react-app/docs/getting-started).

To learn React, check out the [React documentation](https://reactjs.org/).

### Code Splitting

This section has moved here: [https://facebook.github.io/create-react-
app/docs/code-splitting](https://facebook.github.io/create-react-
app/docs/code-splitting)

### Analyzing the Bundle Size

This section has moved here: [https://facebook.github.io/create-react-
app/docs/analyzing-the-bundle-size](https://facebook.github.io/create-
react-app/docs/analyzing-the-bundle-size)

### Making a Progressive Web App

This section has moved here: [https://facebook.github.io/create-react-
app/docs/making-a-progressive-web-app](https://facebook.github.io/create-
react-app/docs/making-a-progressive-web-app)

### Advanced Configuration
```

```
This section has moved here: [https://facebook.github.io/create-react-app/docs/advanced-configuration](https://facebook.github.io/create-react-app/docs/advanced-configuration)

### Deployment

This section has moved here: [https://facebook.github.io/create-react-app/docs/deployment](https://facebook.github.io/create-react-app/docs/deployment)

### `npm run build` fails to minify

This section has moved here: [https://facebook.github.io/create-react-app/docs/troubleshooting#npm-run-build-fails-to-minify](https://facebook.github.io/create-react-app/docs/troubleshooting#npm-run-build-fails-to-minify)
```

```
# A generic, single database configuration.

[alembic]
# path to migration scripts
# Use forward slashes (/) also on windows to provide an os agnostic path
script_location = alembic

# template used to generate migration file names; The default value is %%
(rev)s_%%(slug)s
# Uncomment the line below if you want the files to be prepended with date
and time
# see https://alembic.sqlalchemy.org/en/latest/tutorial.html#editing-the-
ini-file
# for all available tokens
# file_template = %%(year)d_%%(month).2d_%%(day).2d_%%(hour).2d%%
(minute).2d-%%(rev)s_%%(slug)s

# sys.path path, will be prepended to sys.path if present.
# defaults to the current working directory.
prepend_sys_path = .

# timezone to use when rendering the date within the migration file
# as well as the filename.
# If specified, requires the python>=3.9 or backports.zoneinfo library.
# Any required deps can installed by adding `alembic[tz]` to the pip
requirements
# string value is passed to ZoneInfo()
# leave blank for localtime
# timezone =
```

```
# max length of characters to apply to the "slug" field
# truncate_slug_length = 40

# set to 'true' to run the environment during
# the 'revision' command, regardless of autogenerate
# revision_environment = false

# set to 'true' to allow .pyc and .pyo files without
# a source .py file to be detected as revisions in the
# versions/ directory
# sourceless = false

# version location specification; This defaults
# to alembic/versions.  When using multiple version
# directories, initial revisions must be specified with --version-path.
# The path separator used here should be the separator specified by
"version_path_separator" below.
# version_locations = %(here)s/bar:%(here)s/bat:alembic/versions

# version path separator; As mentioned above, this is the character used
to split
# version_locations. The default within new alembic.ini files is "os",
which uses os.pathsep.
# If this key is omitted entirely, it falls back to the legacy behavior of
splitting on spaces and/or commas.
# Valid values for version_path_separator are:
#
# version_path_separator = :
# version_path_separator = ;
# version_path_separator = space
# version_path_separator = newline
version_path_separator = os  # Use os.pathsep. Default configuration used
for new projects.

# set to 'true' to search source files recursively
# in each "version_locations" directory
# new in Alembic version 1.10
# recursive_version_locations = false
